SUMMARY

Software engineer with 2 years of experience in backend game development using Go. Familiar with Java for backend and React for frontend, with a strong foundation in web development. Quick to adapt to new technologies and technical requirements.

SKILLS

Languages	Go, Java, JavaScript, SQL
Backend	Fiber, Gin, Echo, Spring Boot, REST, JWT, WebSocket
Data	MongoDB, Redis, PostgreSQL, MySQL, SQL Server
Architecture	Clean Architecture, Hexagonal, Microservices, MVC
Frontend	React, Material UI, Bootstrap
Workflow	Git, GitLab CI/CD, GitHub, Docker, Kubernetes, unit & integration tests

EXPERIENCE

Suntek JSC

Oct 2024 – Present

Backend Game Engineer

Ho Chi Minh City

- Sole backend on each title in a squad formed by PM: Game Designer (also BA), 1–2 frontend, artist, animation, sound designer, and QA.
- After the backend lead assigned the project, received requirements and the GDD from Game Design and implemented the full server-side game logic — 21 production titles, including one real-time multiplayer game.
- Worked directly with GD throughout on mechanics, balance, and edge cases; after backend-lead code review, supported frontend API integration and continued balance tuning with GD.
- Session-based titles: core play loop, rewards, player account state, bonus features, limited-time events, and economy balance so live traffic stays fair and predictable.
- Real-time multiplayer title: server-authoritative gameplay, entity sync, rewards, and WebSocket communication.
- Kept latency stable under concurrency with goroutines, channels, and Redis caching that reduced MongoDB read load.
- Built simulation tools and result templates so Game Design can validate outcomes and tune balance before release.
- Promoted each title through QA testing, customer staging, then production — Docker images on a Kubernetes cluster via GitLab CI/CD.

Go (Fiber) · MongoDB · Redis · WebSocket · Docker · GitLab CI/CD · Kubernetes · Clean Architecture

Gameplay demos (on request): Demo 1 · Demo 2 · Demo 3 · more titles · multiplayer

JA Gaming

Dec 2025 – Present

Freelance Backend Engineer · Game portal

Remote

- Built and developed the server-side game portal — the backend that hosts games and exposes Fiber APIs to clients.
- Structured the service in Clean Architecture so portal logic stays independent of Fiber, Redis, and PostgreSQL.
- Persisted portal data in PostgreSQL and used Redis for hot, high-read paths.
- Containerized portal services with Docker for a repeatable deploy path.

Go (Fiber) · Redis · PostgreSQL · Docker · Clean Architecture

SELECTED PROJECT

Social Networking Platform

Sep 2024 – Present

Personal · Go microservices

- Designed a Facebook-inspired backend in Go (Echo) with hexagonal architecture so each domain stays replaceable.
- Split the system into user (JWT auth), post, friend, chat, notification, and an embedded mini-game service.
- Routed traffic through Kong; MongoDB for data, Redis for hot state, Docker for deploy, WebSockets for messaging and presence.
- Built the client in React (Hooks, Context, Material UI).

EDUCATION

Saigon University

2021 – 2025

B.Eng. Software Engineering · Information Technology

Ho Chi Minh City

- GPA 3.23 / 4.00 (8.07 / 10).

AWARDS

Improvement Star

2025

Suntek JSC

- Awarded for outstanding performance and year-over-year improvement.
- Award photos
